

HADEED SHAHID

+92-323-1483650 hadeed.shahid08@gmail.com [linkedin.com/in/hadeedshahid](https://www.linkedin.com/in/hadeedshahid)

Frontend Software Engineer with 3+ years of experience developing scalable, multi-tenant web applications using Next.js, React.js, and TypeScript. Proven track record of launching localized platforms for international markets (Egypt, KSA) and mentoring junior developers. Actively seeking opportunities to leverage strong technical skills and contribute to innovative projects with global reach.

Experience

Dubizzle Labs

March 2024 – Present

Software Engineer

Lahore, Pakistan

- Worked on a high impact migration project at Hatl2ee, a platform serving millions of users, migrating the system from PHP Laravel to a modern Next.js framework, enhancing performance, scalability, and user experience.
- Contributed to improving application responsiveness by 30% and reducing load times during migration phases.
- Implemented and optimized complex search queries using Amazon OpenSearch, improving search speed by 40% and significantly enhancing data retrieval efficiency and user experience on large-scale platforms.
- Launched Dubizzle Motors Egypt, successfully introducing a localized and multi-tenant system for car classifieds.
- Refactored codebases to support scalable multi-tenant architecture enabling seamless onboarding of new markets and clients.
- Performing critical bug fixes and hot fixes on production systems to maintain uptime and reliability.

Dubizzle Labs

July 2023 – March 2024

Associate Software Engineer

Lahore, Pakistan

- Developed a localized and multi-tenant system for Dubizzle Motors Egypt, enhancing user experience and operational efficiency for car classifieds.
- Contributed to OLX Motors by performing development tasks and resolving bugs, improving the overall functionality of the car buying and selling portal.
- Worked on Zameen.com, a property classifieds platform, where I helped launch multiple pages and sections, offering new features and functionality to users.
- Implemented a localized and multi-tenant system for Bayut.sa, a property classifieds platform in KSA, tailoring the experience to the regional market.
- Conducted extensive debugging and code refactoring, enhancing the stability and maintainability of various classified platforms.
